

SuiteCommerce Enterprise

Fast, Intuitive Storefronts on Any Device

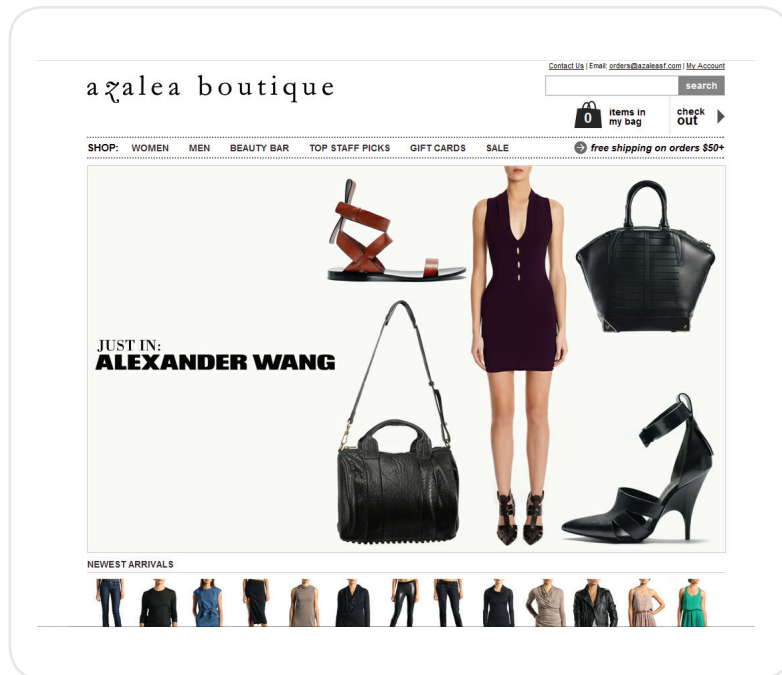

KEY BENEFITS

- Convert your shoppers into customers with highly visual and blazing fast shopping experiences
- Extend your relationship with your customers to any device and channel, including smartphones and tablets
- Support any business model, including B2C and B2B
- Help your shoppers find what they want quickly with powerful search and guided navigation
- Manage one or more storefronts and conduct commerce in different countries, languages, currencies and channels
- Future-proof your solution with a Commerce-as-a-Service (CaaS) architecture that allows you to build solutions for any device, customer, partner and business model

NUCLEUS RESEARCH

Based on its analysis of NetSuite retail customers, Nucleus analysts estimate companies moving to NetSuite from less-automated processes can increase their order fulfillment efficiency by at least 50 percent.

NetSuite’s SuiteCommerce Enterprise provides businesses with fast and intuitive commerce storefronts optimized for delivering great shopping experiences to the channel and device of the shopper’s choice. These storefronts deliver leading ecommerce capabilities like guided navigation, search and dynamic merchandising, optimized for the web, mobile and tablets. Native integration with the comprehensive NetSuite solution for ERP/financials, inventory and order management, warehouse management, end-to-end business management software, web marketing and more allows businesses to increase their online sales while dramatically improving productivity.

Build highly visual, branded sites.

Customer-Centric Shopping Experiences

- Deliver one of the industry’s fastest and most responsive shopping experiences, with instantaneous results to the shopper’s clicks
- Guide your shoppers to the product they want by providing dynamically updated, visual multi-faceted navigation, including selection check-boxes, price sliders, color swatches and more
- Help shoppers find the products you want them to find with a robust search capability that provides advanced capabilities like boosting and spelling corrections
